

[Question 1: What is artificial intelligence?]

Options:

- a) The ability of a machine to think and learn like a human
- b) The ability of a machine to perform tasks autonomously without human intervention
- c) The ability of a machine to understand and interpret emotions
- d) The ability of a machine to replicate human consciousness

[Question 2: Which of the following is an example of artificial intelligence?]

Options:

- a) Virtual Reality
- b) Augmented Reality
- c) Machine Learning
- d) Robotics

[Question 3: What is the main goal of artificial intelligence?]

Options:

- a) To replace human intelligence
- b) To assist humans in solving complex problems
- c) To eliminate the need for human intervention
- d) To create machines with emotions

[Question 4: Which technology is commonly used in artificial intelligence for decision-making processes?]

Options:

- a) Blockchain
- b) Natural Language Processing
- c) Internet of Things
- d) Quantum Computing

[Question 5: What is the difference between narrow AI and general AI?]

Options:

- a) Narrow AI can perform a specific task, while general AI can perform any intellectual task a human can do
- b) Narrow AI has emotions, while general AI does not
